

Saguaros Soak it Up!

Hey Kids! It was great to see many of you at *Ted Walker Days* out at Old Tucson! It was really wet that day, but it sure was nice to get some rain, which made the plants and animals happy!

Did you know that cacti like the *Saguaro*, the *Barrel* and the *Organ Pipe* store water in their trunks and branches? They can expand like accordions to hold all the water.

A Giant Saguaro can soak up **42 gallons** of water during the rainy season and save it until the next rain.
